YET ANOTHER LEADING EDGE COATINGS DEVELOPMENT FROM CMP "EKOMATE SERIES"

- " Waterborne coatings for dry container "

After many years of focused research and development of waterborne coating systems, CMP have made a significant breakthrough and have introduced **EKOMATE** advanced water borne coating system which could reduce VOC emissions by **80%** when compared to solvent borne coating system and in addition **EKOMATE** products improve the working environment by reducing odours and being water rather than solvent borne removes a number of hazards associated with the risk flash ignition and fire.

Following first class co-operation with dry container box manufacturers and owners, which included many trial applications in China - the hub of the new container box manufacturing industry, the trials have demonstrated that the **EKOMATE** technology can be applied on existing production lines with minimum adjustment to the norms or investment in new equipment.

CMP Shanghai is gearing up for manufacturing 2000 tons/month and is expanding **EKOMATE** product production capacity to meet market demand which in turn continues to elevate CMP's green policy and ongoing commitment to the environment.

EKOMATE PRODUCTS ARE AVAILABLE NOW!!!!
